# 1. HIFU Vaginal Rejuvenation/tightening

4D HIFU  
irradiation

Thermal energy  
(65°C)  
delivered to  
SMAS

Collagen  
generation skin  
elasticity increase,  
skin tightening

Using a patented thermal energy technology, the vaginal tightening High Intensity Focused Ultrasound System targets and tightens underlying vaginal tissues by triggering your body's natural production of collagen—without the need for anesthesia, needles, or surgery of any kind. Vaginal Tightening HIFU System has been clinically proven to noticeably tighten the vagina, reduce labial sagging, improve orgasm quality, reduce vaginal dryness, and improve urinary incontinence.

During your treatment, the Vaginal Tightening HIFU System wand will be passed over your external vulvar tissues or applied internally where it will gently heat your internal and external tissues using radiofrequency. The targeted tissues will instantly contract upon application of this heat, with further improvement and tightening occurring gradually.

*The technology is truly non-surgical and results in little-to-no downtime.*

**Vaginal Tightening HIFU System has been clinically proven to:**

- Noticeably tighten vaginal muscles
- Increase sensitivity during intercourse
- Reduce labial sagging
- Reduce vaginal dryness
- Improve urinary incontinence
- Improve orgasm quality

## 2. Orgasm Shot Platelet Rich Plasma Injections

How does the O-Shot® work?

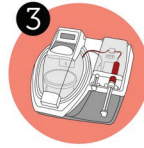

The O-Shot® was first described by Charles Runnels. It involves treating the clitoris and vaginal walls as well as the vulva with platelet rich plasma (PRP). Platelets are components of blood that help with healing wounds. When separated from blood and concentrated – (platelet rich plasma) – the instillation of this can result in the release of large amounts of growth factors and stem cells ....in the treated areas.

1  
Platelets are cells found in human blood. when activated they stimulate the generation of growth factors that can stimulate the healing process,

2  
Blood is taken from the patient using 60ml syringe.

3  
The blood is put into the autologous platelet separator machine that is programmed to give the precise quantity of PRP.

4  
High consistent concentration of PRP separated by the machine is then taken out and injected into the skin containing growth factor.

The O-Shot® specifically targets the clitoris and the distal anterior vaginal wall. PRP injected into these areas helps with the proliferation of new collagen, nerves and blood vessels. This results in improved sensation and tightening in these areas and hence makes it more likely for a woman to reach orgasm.

### 3. Electromagnetic Muscle Stimulation

#### How does EMSCULPT work?

Hiemsture uses patented HIFEM (High Intensity Focused Electromagnetic) technology similar to an MRI device to induce powerful muscle contractions that are not achievable with crunches or sit-ups.

When exposed to these powerful contractions, the skin remains unaffected, while the energy penetrates to the fat and muscle layers. As a result, your body responds with a deep remodeling of its inner structure for muscle building and body sculpting.

#### Body Toning & Sculpting

- Builds and tones muscle
- Strengthens your core
- 1 treatment = hundreds of crunches
- FDA-approved, non-invasive, NO downtime
- Up to 20% fat reduction
- Firms abdomen, buttocks, upper arms, and legs

## 4. Maxlipo Laser Fat Loss Therapy

Welcome to Laser Lipolysis.. The clinically-proven new treatment that painlessly reduces inches and removes stubborn body fat.

### 6D LASER & HIEMTSURE

Slimming Build Muscle Machine

- ▶ 635NM Wavelength
- ▶ Red light
- ▶ 6 Laser lamps
- ▶ 3500W power
- ▶ Gain muscle
- ▶ Reduce fat

Maxlipo revolutionizes body contouring in a safe, effective treatment. There are no needles, no incisions and no recovery time needed.

It involves six quick and painless treatments. You simply lie under treatment for 20 minutes on your front and 20 minutes on your back. Unlike minimally invasive or traditional liposuction, it allows you to continue your daily activities without any interruption.

Laser Lipolysis is FDA Approved for Overall Body Circumference Reduction

Reveal your TRUE shape in as little as two weeks!

ZERO Pain | ZERO Surgery | ZERO Downtime

The laser is a 100% non-invasive body sculpting device that has caused a REVOLUTION in body sculpting by making it possible to achieve superior results clinically proven! In just 2 weeks and with no risk!

### **Benefits:**

- Reduces pockets of fat,
- Substantially reduced the appearance of cellulite,
- Reduces body circumference and
- Improves skin tone and elasticity.

*It is especially effective at targeting stubborn cellulite and other areas not responding to diet/exercise.*

## 5. HIFU Non Surgical Face-lifting and Skin tightening

HIFU (High Intensity Focused Ultrasound) is a new, clinically proven medical-grade technology, for non-invasive, non-surgical lifting and tightening of sagging skin and the reduction of lines and wrinkles. This advanced technology is able to achieve results that were once only possible with surgery!

High Intensity Focused Ultrasound, causes a thermal reaction to deep structures, such as SMAS (Superficial Musculo-aponeurotic System), where the connective tissue typically starts to weaken. It works deep below the surface to stimulate the growth of collagen without harming the outer layer of skin. This results in long-lasting firming, tightening and lifting of the skin, giving you a more youthful appearance after just one treatment.

**Dramatic results can be achieved with only one or two sessions!**

**Contact us on 0719-328-339 and let us Rejuvenate you!**
